

Integrated Insights Engine

May 2026

Agenda

01

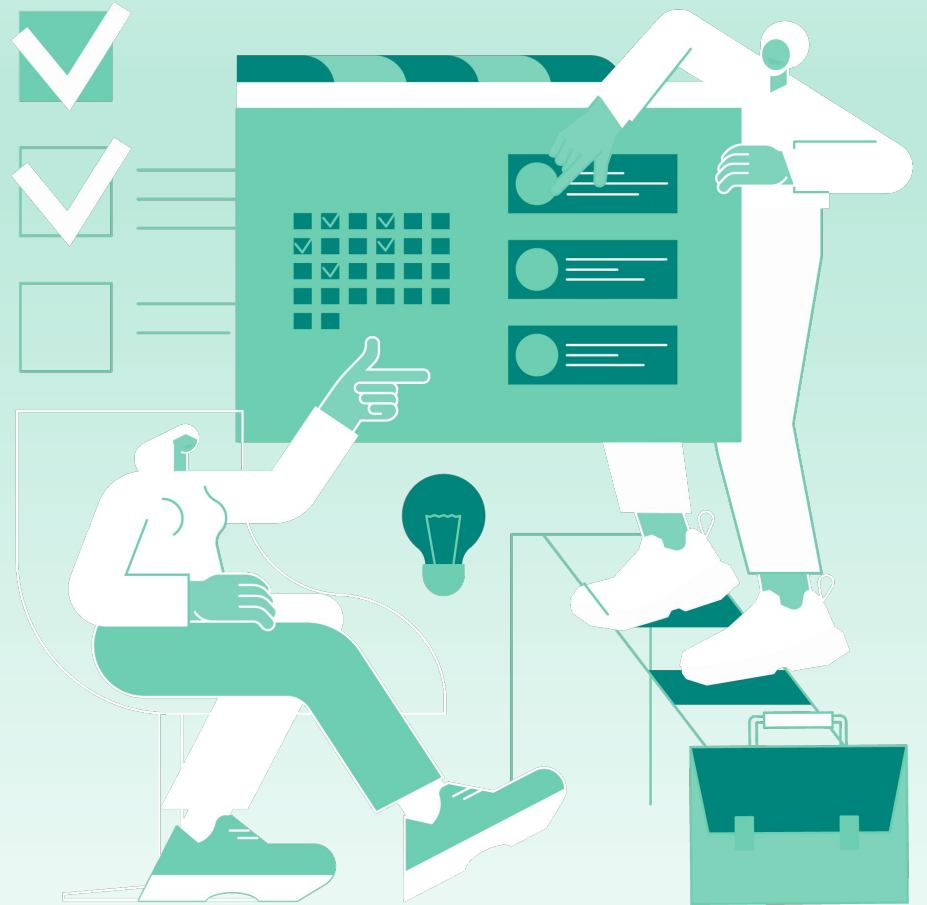

Recap of AI priorities and
ITACS 2025-26 process

02

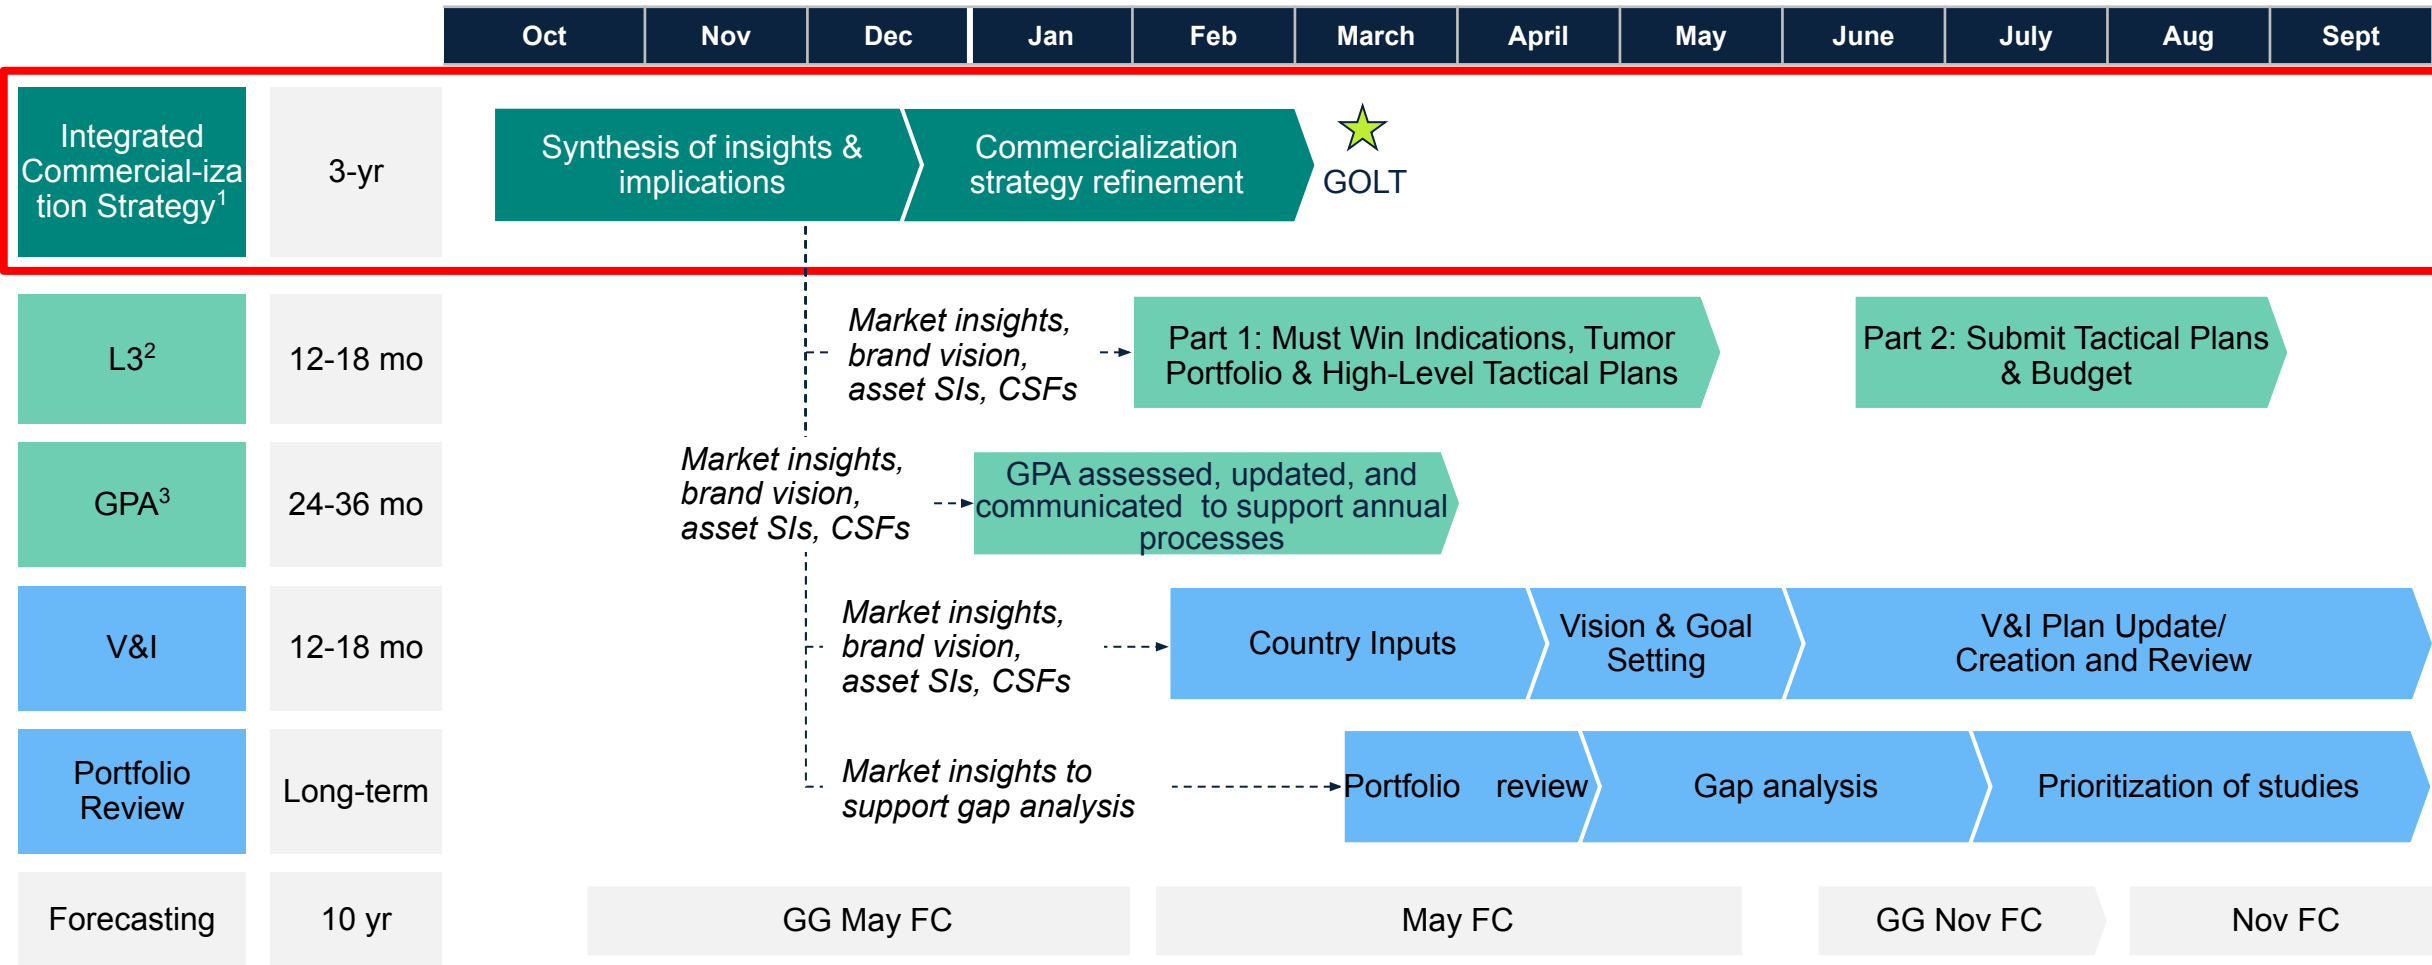

Vision for leveraging AI for
ITACS Insights Synthesis

03

How it could work

Context: ITACS is the base for broader organizational processes across functions

¹ For commercialization planning; MRL Portfolio Review and Study Prio are out of scope.

² L3 Early driven by development milestones; not done as part of annual planning cycle

³ GPA (Global Plan for Access) based on development cycle (at indication level, aligned with L3)

Recap of ITACS 2025-26: Fully internalized and executed upon for the first time

 **Focus of this document**

2025-26 timelines for ITACS

Sep	Oct	Nov	Dec	Jan	Feb	Mar
-----	-----	-----	-----	-----	-----	-----

Kickoff (9/18 and 9/22)

- Project & timeline overview
- Include cross-functional team

Synthesize insights & implications

- Focus on synthesizing insights rather than restating the facts
- Cross-functional, including relevant GMax considerations, Dx requirements, insights from SLs, etc.
- Led and coordinated by DHH, inputs by cross-functional teams (Marketing, GMax, V&I, CI, others as needed)

Develop strategy

- Develop/ refine vision, strategic imperatives, and critical success factors
- Conduct cross-functional workshops as needed
- Articulate high-level cross-functional plans to support strategic imperatives

[Tumor Teams]
Coordinate with Assets to ensure tumor/asset alignment

Integrate into other organizational processes

- L3
- GPA
- V&I
- Gap analysis
- Other

Orchestrated by DHH

Co-led by marketing, V&I, GMax

Recap of ITACS 2025-26: DHH team led the Insights Synthesis phase of Integrated Tumor and Assets Commercialization Strategy (ITACS) to help transform how cross-functional insights shape strategic imperatives for upcoming launches

Strategic Impact at scale

15+ workshops across disease areas and assets

250+ participants from across functions

300+ strategic documents reviewed and synthesized

Innovation Through AI

GenAI leveraged to accelerate synthesis and identify cross-functional themes, in fit for purpose manner e.g.,

- Validation of existing CSFs for V940
- Automated tagging and clustering for faster insight digestion in Lung

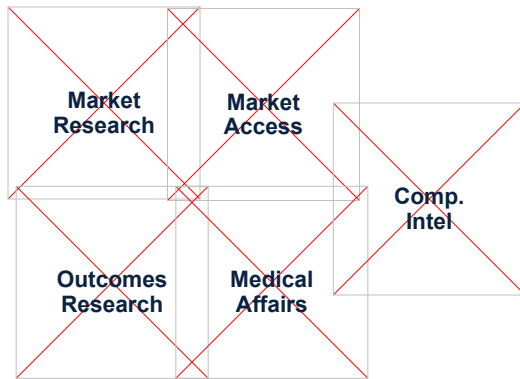

Cross-Functional Collaboration

Inputs integrated from across **cross-functional teams**

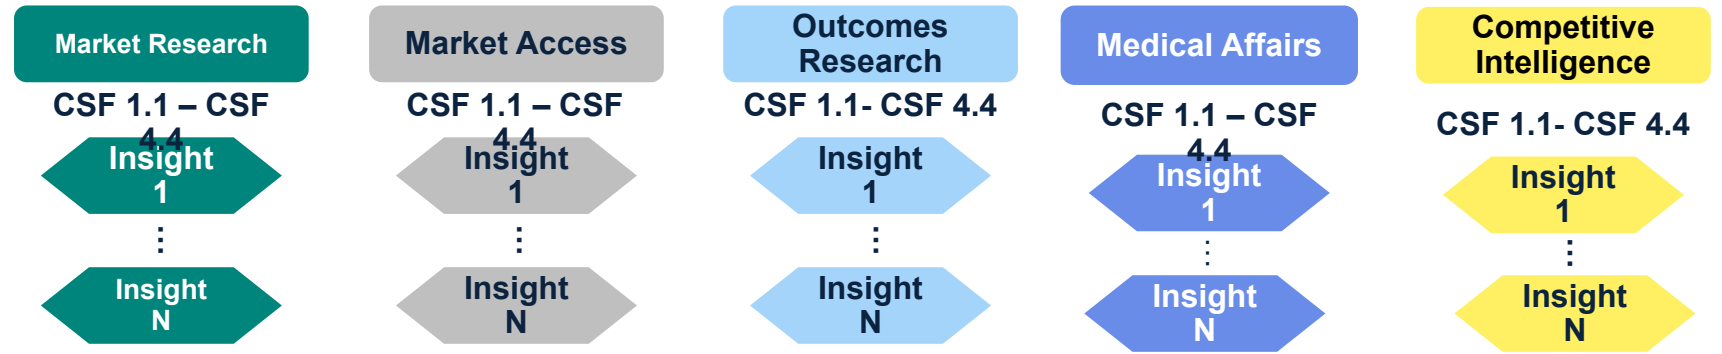

- Global marketing – assets, tumors, precision medicine
- GMAX
- V&I - GMSA, OR
- CI
- DHH – Secondary analytics and Primary Market Research
- Clinical (ADTs/PDTs where relevant)

Generating Insights for ITACS Through a Subject Matter Expert-AI Feedback Loop

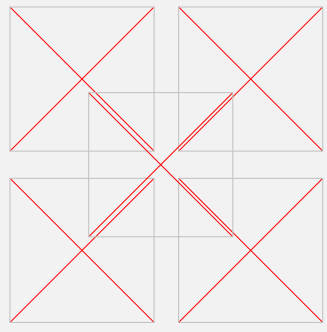

Step 1: Collect functional documents

Step 2: Extract functional insights using multiple AI models and with Analyst + SME validation.

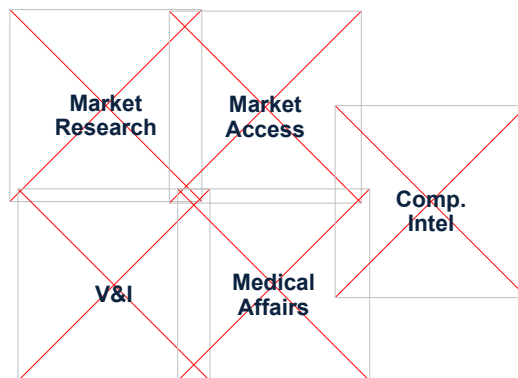

Step 6: SME Key Insight Validation

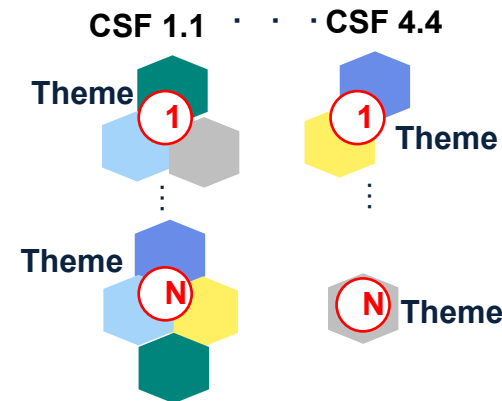

Prewrite + Workshop

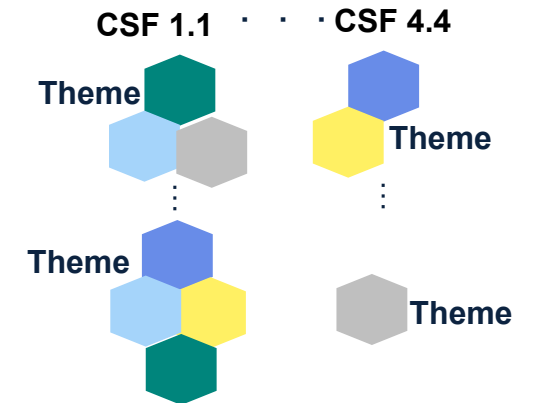

Step 5: Analyst validated extracted insights supporting Strategic Themes

Step 4: Rank order Strategic Themes per CSF

Step 3: Analyst + GenAI group similar insights into Strategic Themes

Agenda

01

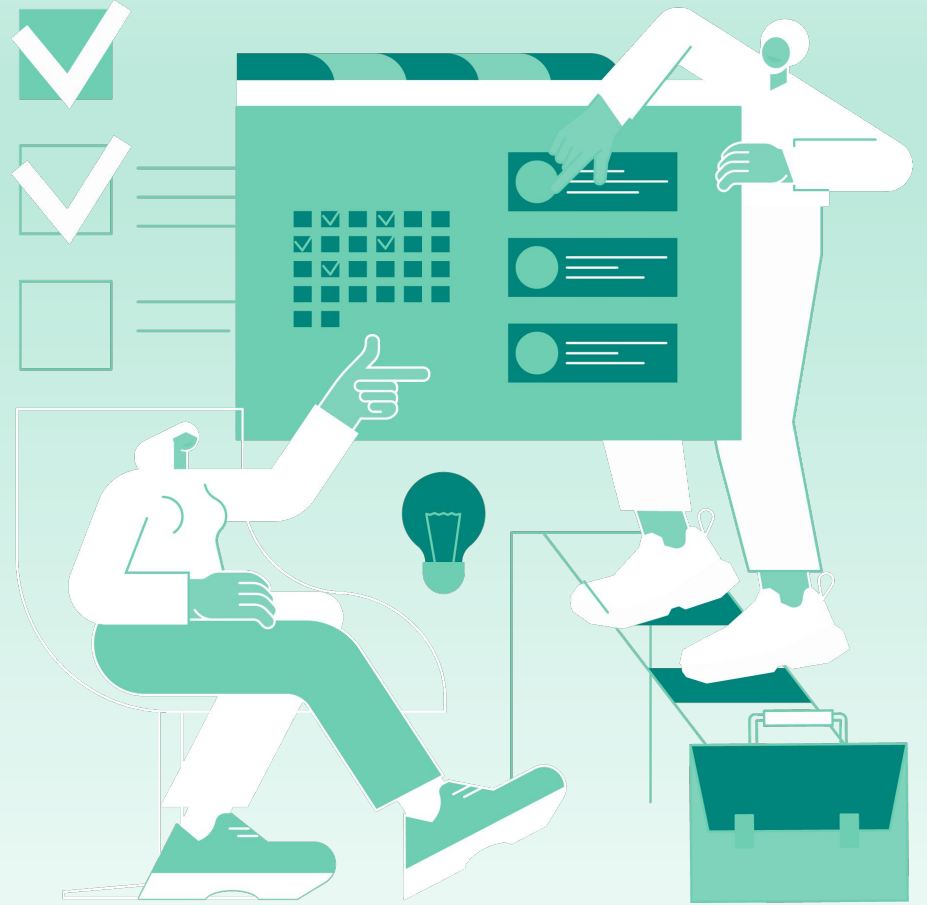

Recap of AI priorities and ITACS 2025-26 process

02

Vision for leveraging AI for ITACS Insights Synthesis

03

How it could work

Opportunity to leverage AI to collect, synthesize, and summarize cross-functional insights for strategic processes

(starting with ITACS, and applicability to long-term strategic planning)

2026

Accelerated generation and synthesis of **cross-functional** insights on a **continuous** basis (vs. documents gathered manually in Sep–Oct, synthesized once a year) available for

1. **Faster synthesis** (what / why / implication)
2. **Faster response to KBQs**

To be piloted through ITACS 2026-27, but applicability to be ensured for other strategic processes (e.g., L3Next)

Details follow

2027+ (Initial view on Long term – pending feasibility and prioritization discussions)

Connected ecosystem of agents, that go from raw data to functional insights/signals to cross-functional insights

“Living” ecosystem, that continuously mines and applies new factors to internal insights and let tumor teams decide how to integrate the output - **TBD**

Integrated Insights Engine

Accelerated generation and synthesis of cross-functional insights on a continuous basis to enable faster and smarter strategic decisions, planning and launch excellence through Generative / Agentic AI

	From	To
Faster	Months: SME-validated insights for strategy refresh Days/Weeks: Ad-hoc business questions	Weeks: SME governance-ready insights Minutes: On-demand cross-functional perspective
Strategic	SMEs rebuild context, spending time and effort on information gathering, synthesis, triangulation	SMEs focus on strategy , with AI generated “intelligent drafts” as a starting point
Confident	Decentralized, version-controlled decks Adhoc duplication of efforts	Validated single source of truth , available to all Preservation of enterprise learning
Integrated	Episodic cross-functional integration	Continuous cross-functional integration
Operating	100% Human-driven	AI-augmented, human led

What this will be, what this will not be ...

What this **WOULD** be

- ☒ Platform that enables a consistent repository of available functional insights

- ☒ AI enabled starting point / draft of cross-functional insights synthesis and implications

- ☒ Enabler for objective and timely decision-making

This would **NOT** be

- ☐ Replacement of human expertise

- ☐ Process recommendation for cross-functional collaboration across various teams

- ☐ Final strategic view on priorities / implications of various trends or insights

Agenda

01

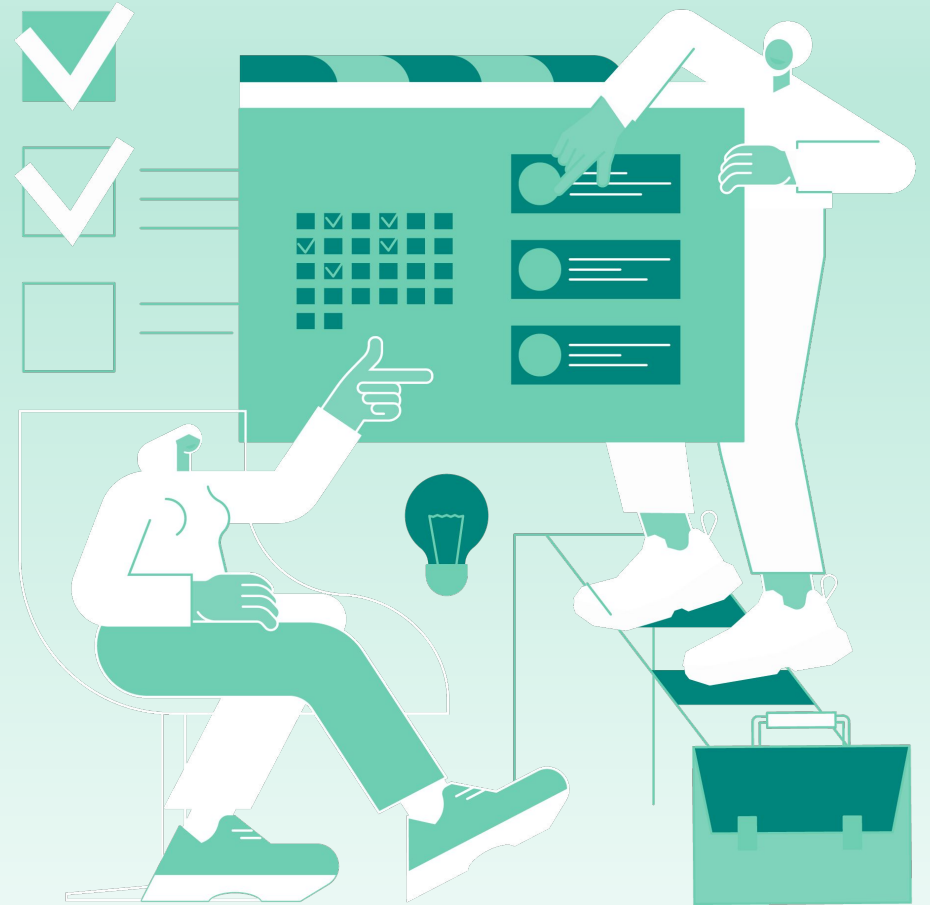

Recap of AI priorities and ITACS 2025-26 process

02

Vision for leveraging AI for ITACS Insights Synthesis

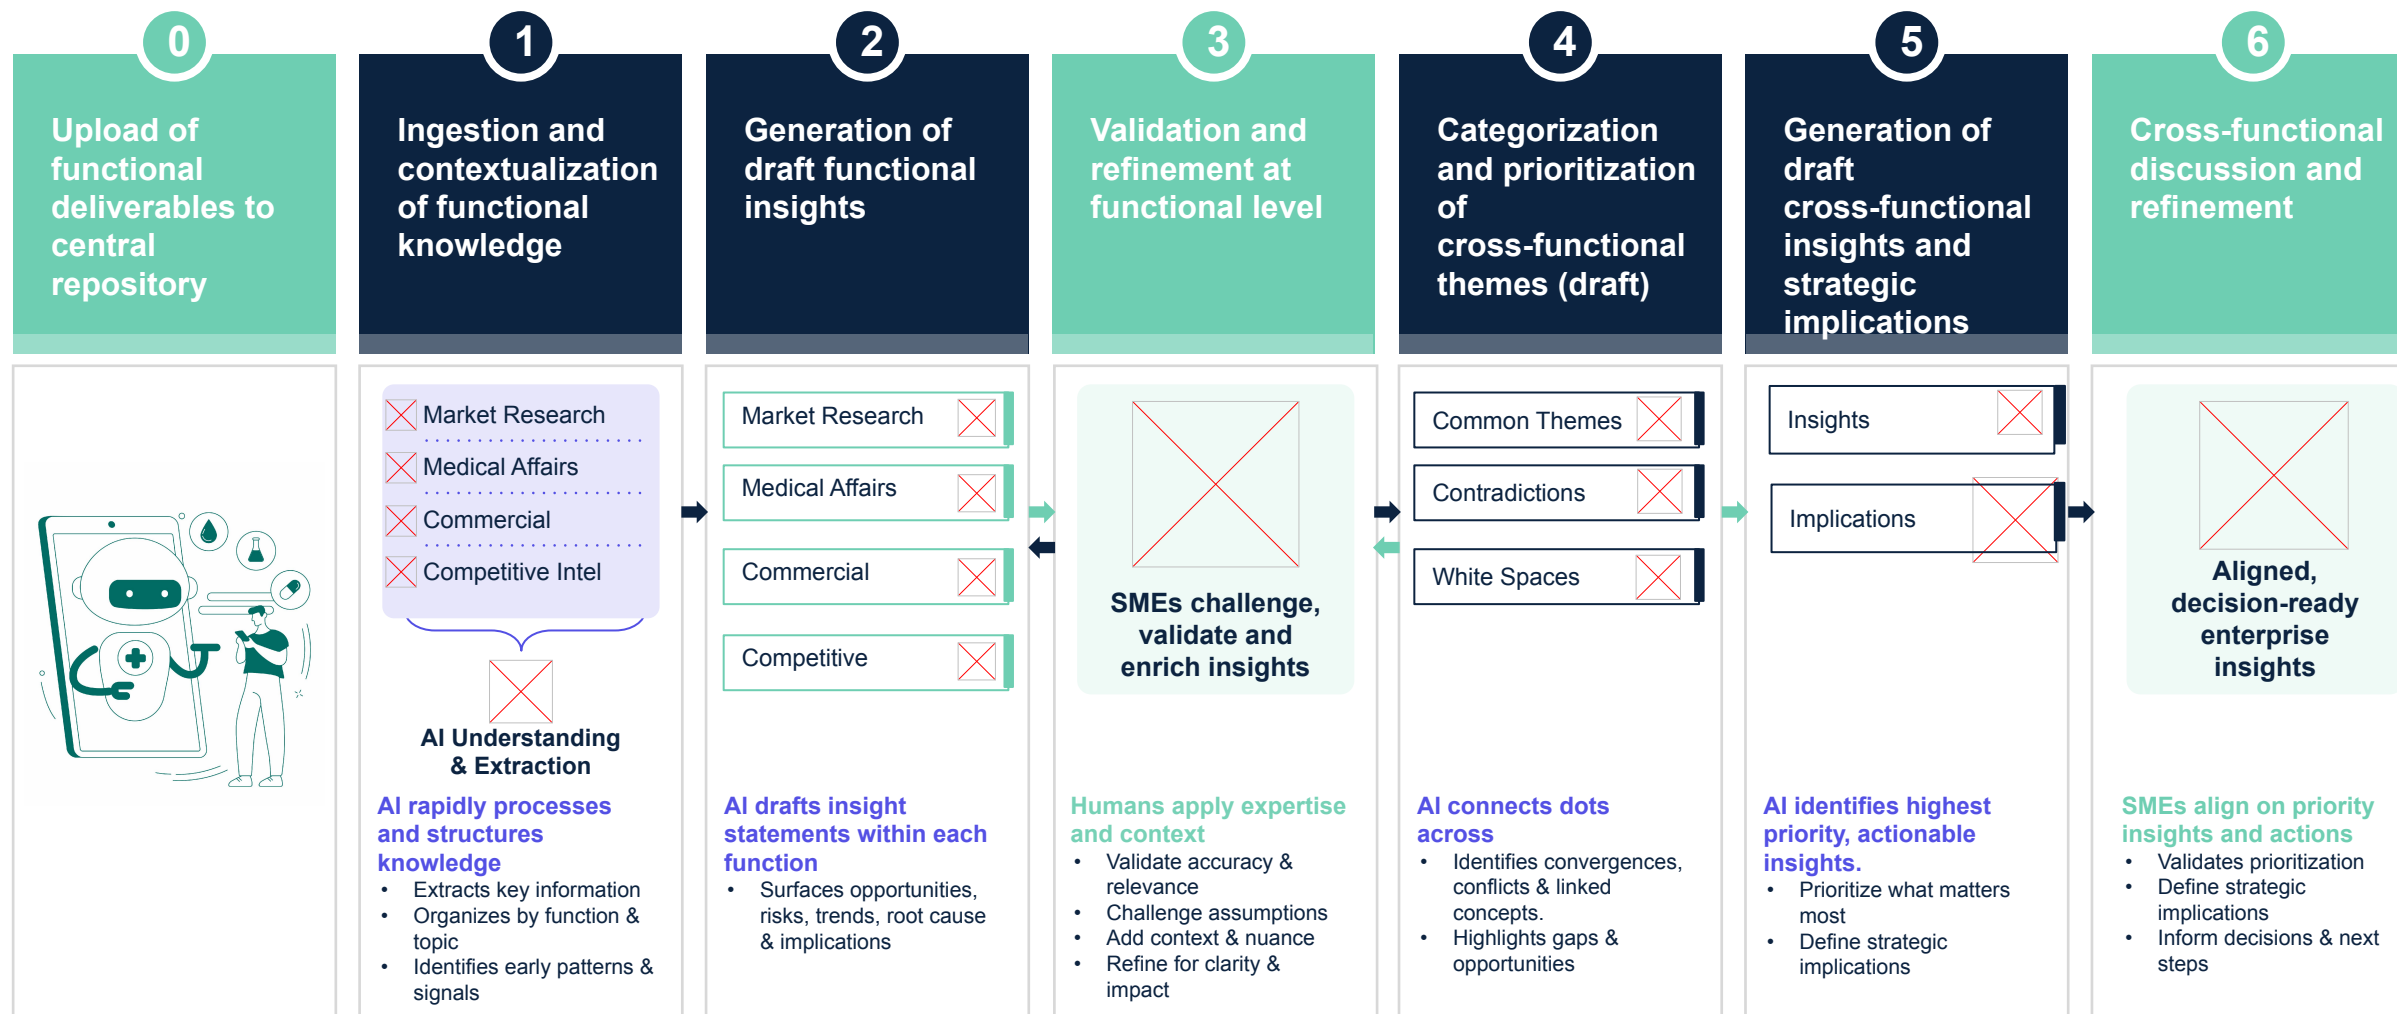

03

How it could work

How AI and SMEs would generate validated enterprise insights

A collaborative process that turns functional knowledge into enterprise-aligned, decision-ready insights.

Legend:

Human

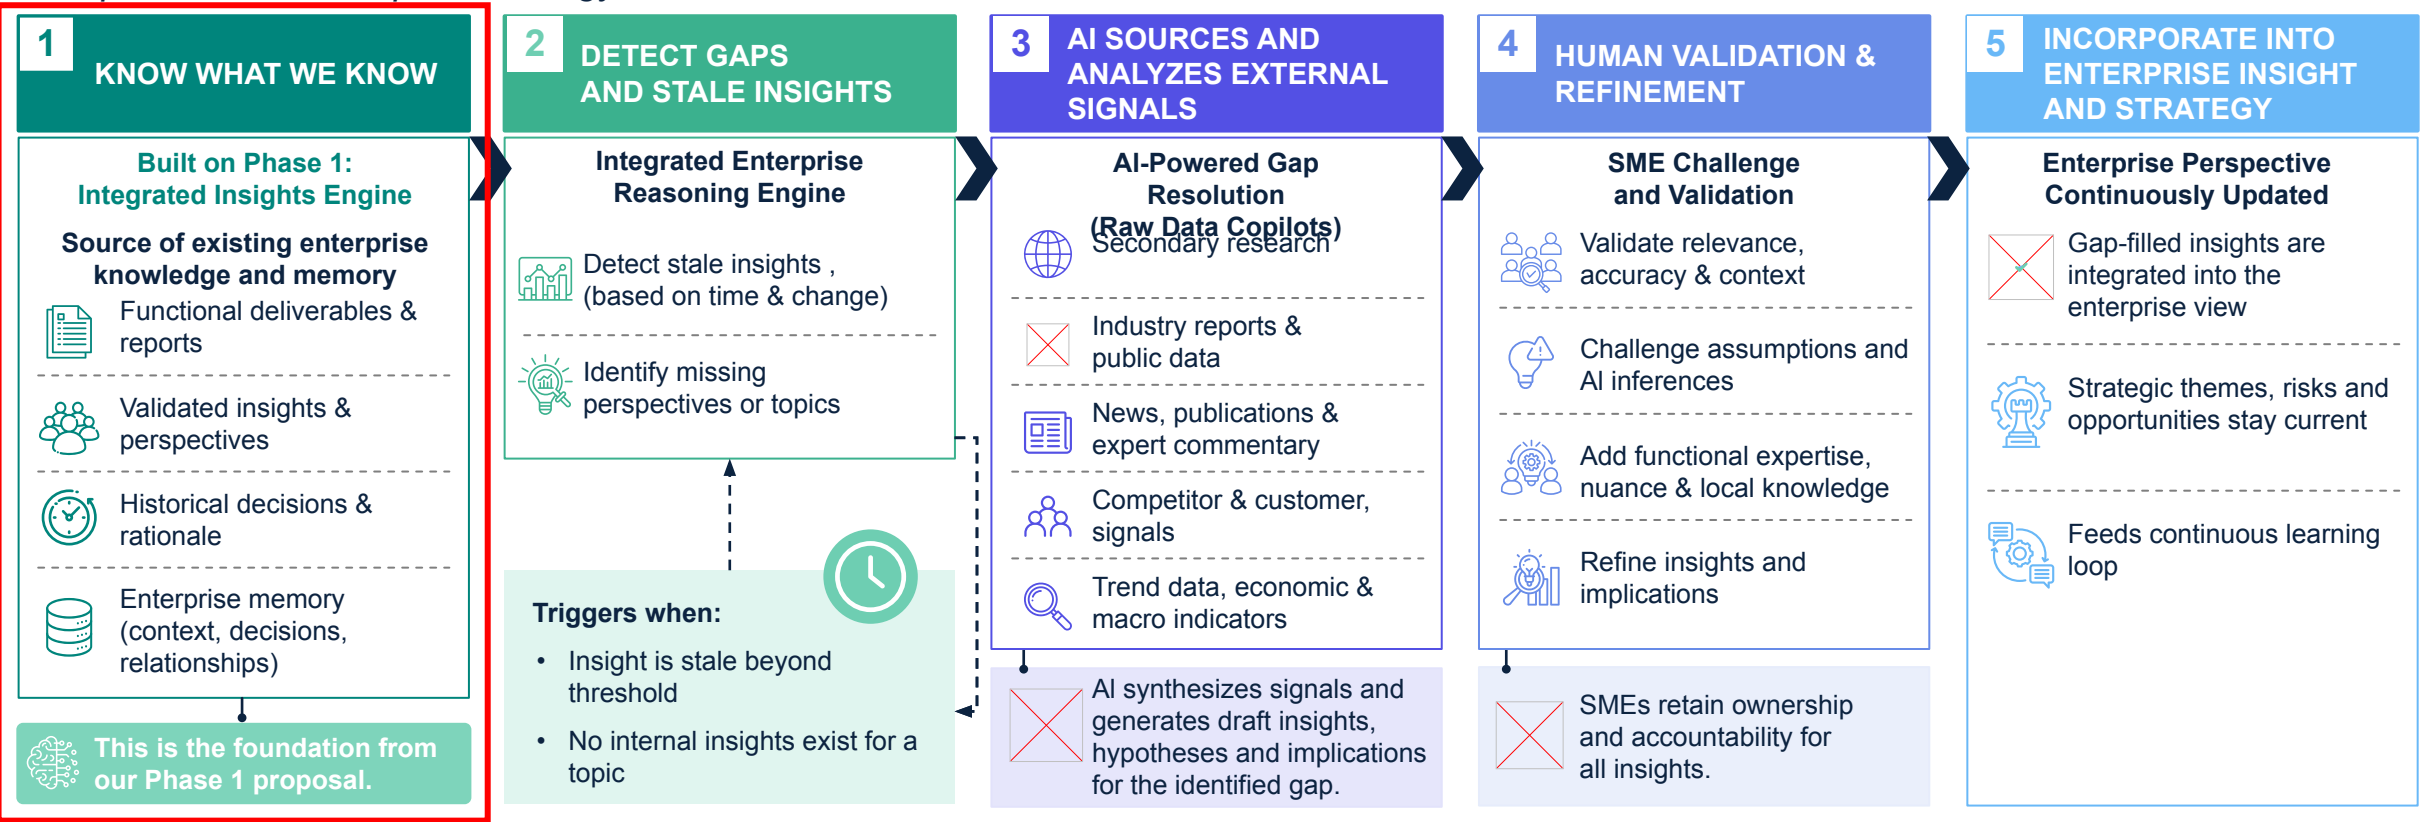

AI

Beyond Static Knowledge: AI Detects and Closes Enterprise Knowledge Gaps

The system proactively identifies stale or missing insights and uses external signals to fill gaps - always validated by SMEs before being incorporated into enterprise strategy.

The system doesn't just organize **what we** have it helps us discover what we might be missing.

This proactive gap detection and resolution runs continuously across functions, See next slide for how enterprise intelligence is strengthened and enables smarter, faster strategic decisions.

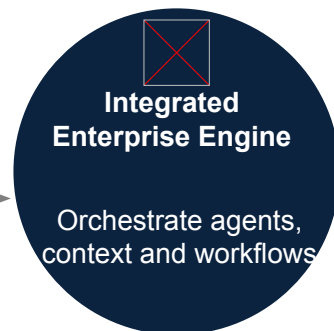

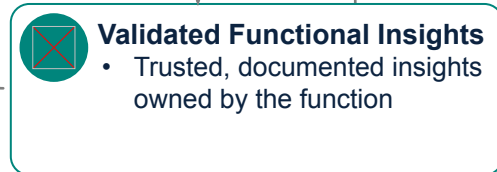

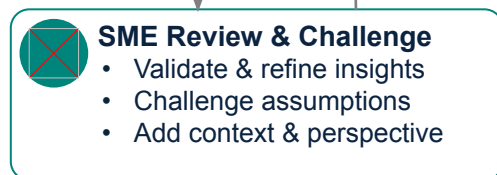

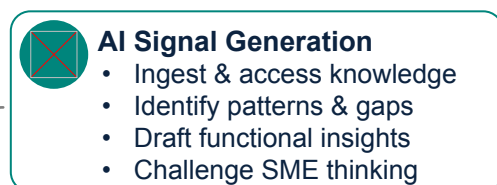

Enterprise strategy evolves through continuous human-AI alignment in a repeatable process.

AI accelerates insight generation. Humans validate, challenge and align. The system learns and gets smarter over time.

1 LOOP1

Functional Insight Refinement

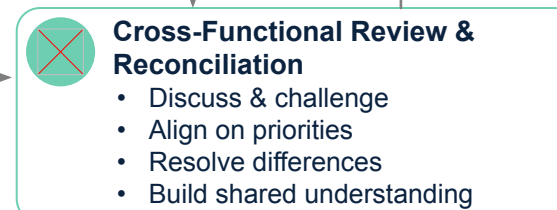

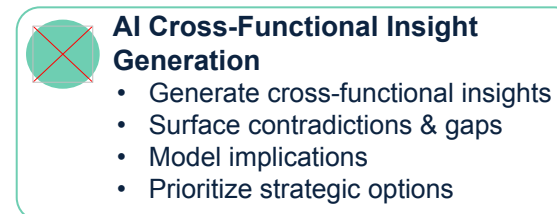

AI and SMEs iterate within each function to build validated insights.

2 LOOP2

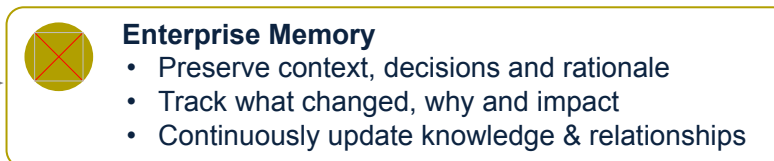

Cross-Functional Insight Generation & Reconciliation

Functions align, challenge and reconcile to create an enterprise view.

3 LOOP3

Continuous Learning & Institutional Memory
Every decision and insight feeds the system to improve future reasoning.

This is not a one-time process. It is a living system of alignment, learning and improvement.

Outputs: Enterprise Insights Platform: Ready-to-Use Strategic Synthesis and Cross-Functional Strategic Thought Partnership

Automated Cross-Functional Insight Synthesis

Continuously synthesizes structured cross-functional insights

Illustrative output

Theme	What	Why	Implication	Reference
Physician Adoption Dynamics	Uptake strongest in academic	Community Physicians remain comfortable	Target community education and KOL	MR #1, p.9 Med #6 p.2
Access Evidence	Early payer hesitancy in regional plans	long-term outcomes evidence	HEOR evidence communication	OR #30, p.6 MA #10 p.17

Continuously synthesized from commercial, medical affairs, market access, competitive intelligence, outcomes research, DHH

What has changed since the last review?

Where are risks or opportunities emerging?

Where should strategy adjust (asset, indication, or enterprise)?

Chat-based Cross-Functional Strategic Thought Partner

Enables leaders to interrogate enterprise insight through strategic questions

Illustrative output

User Prompt (Strategic Question): Expand on community oncology adoption through KOL education and targeted field engagement

GenAI Cross-Functional Perspective

Medical Affairs Perspective

- Community physicians may require stronger clinical differentiation vs existing IO combinations

Market Access Perspective

- Regional payers may require clearer value evidence

Competitive Intelligence Perspective

- Competitor positioning emphasizes durability of response

Refined Strategic Direction

- Pair physician education with biomarker testing support
- Engage payers earlier with outcomes evidence
- Strengthen differentiation messaging vs competitor IO regimens

Strategies are cross-functionally pressure-tested before alignment meetings, refocusing meetings on validation and strategic options

Inputs: Final cross-functional deliverables compiled on a defined cadence and integrated with historical readouts.

Enterprise Process Deliverables *(Current + Historical)*

- L3: Early, Next, Late Summary Decks
- EGTM / GFLS
- ITACS
- LDRC
- LROP
- GPA
- Portfolio Review

Functional Deliverables *(Current + Historical)* Not exhaustive

- **DHH:** Primary and secondary data research reports
- **Global + Regional Commercial** – Launch Strategy
- **Market Access** – Payor insight reports
- **Medical Affairs** – Group Input Meetings (GIMs)
- **Outcomes Research** – Evidence summaries
- **Competitive Intelligence** – Conference Readouts

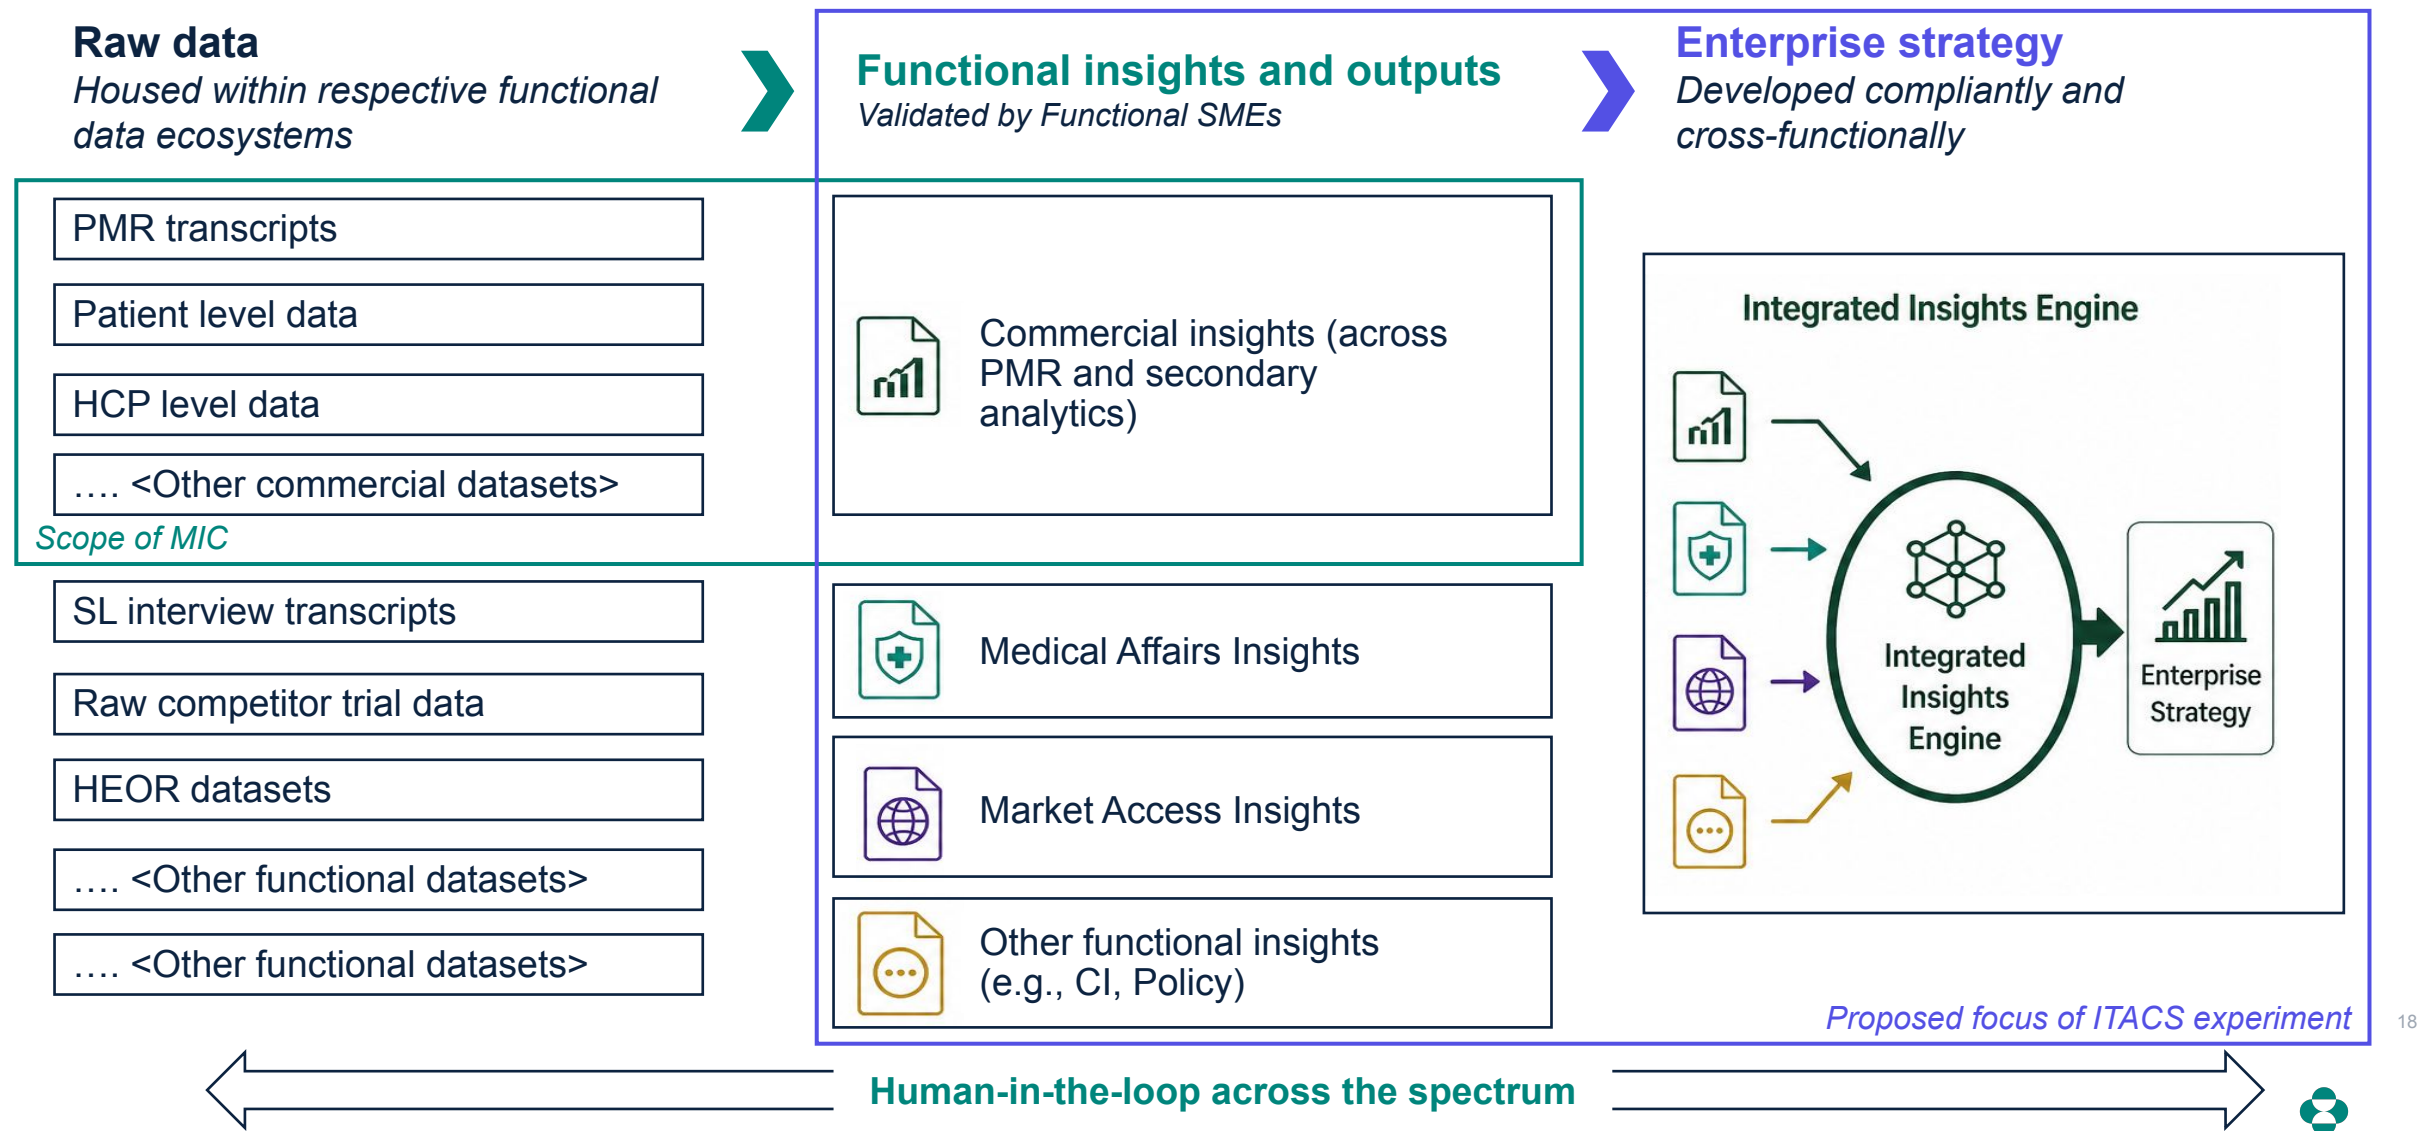

Documents are structured, tagged, and continuously indexed for enterprise retrieval and synthesis

APPENDIX ----- WORKING DETAILS

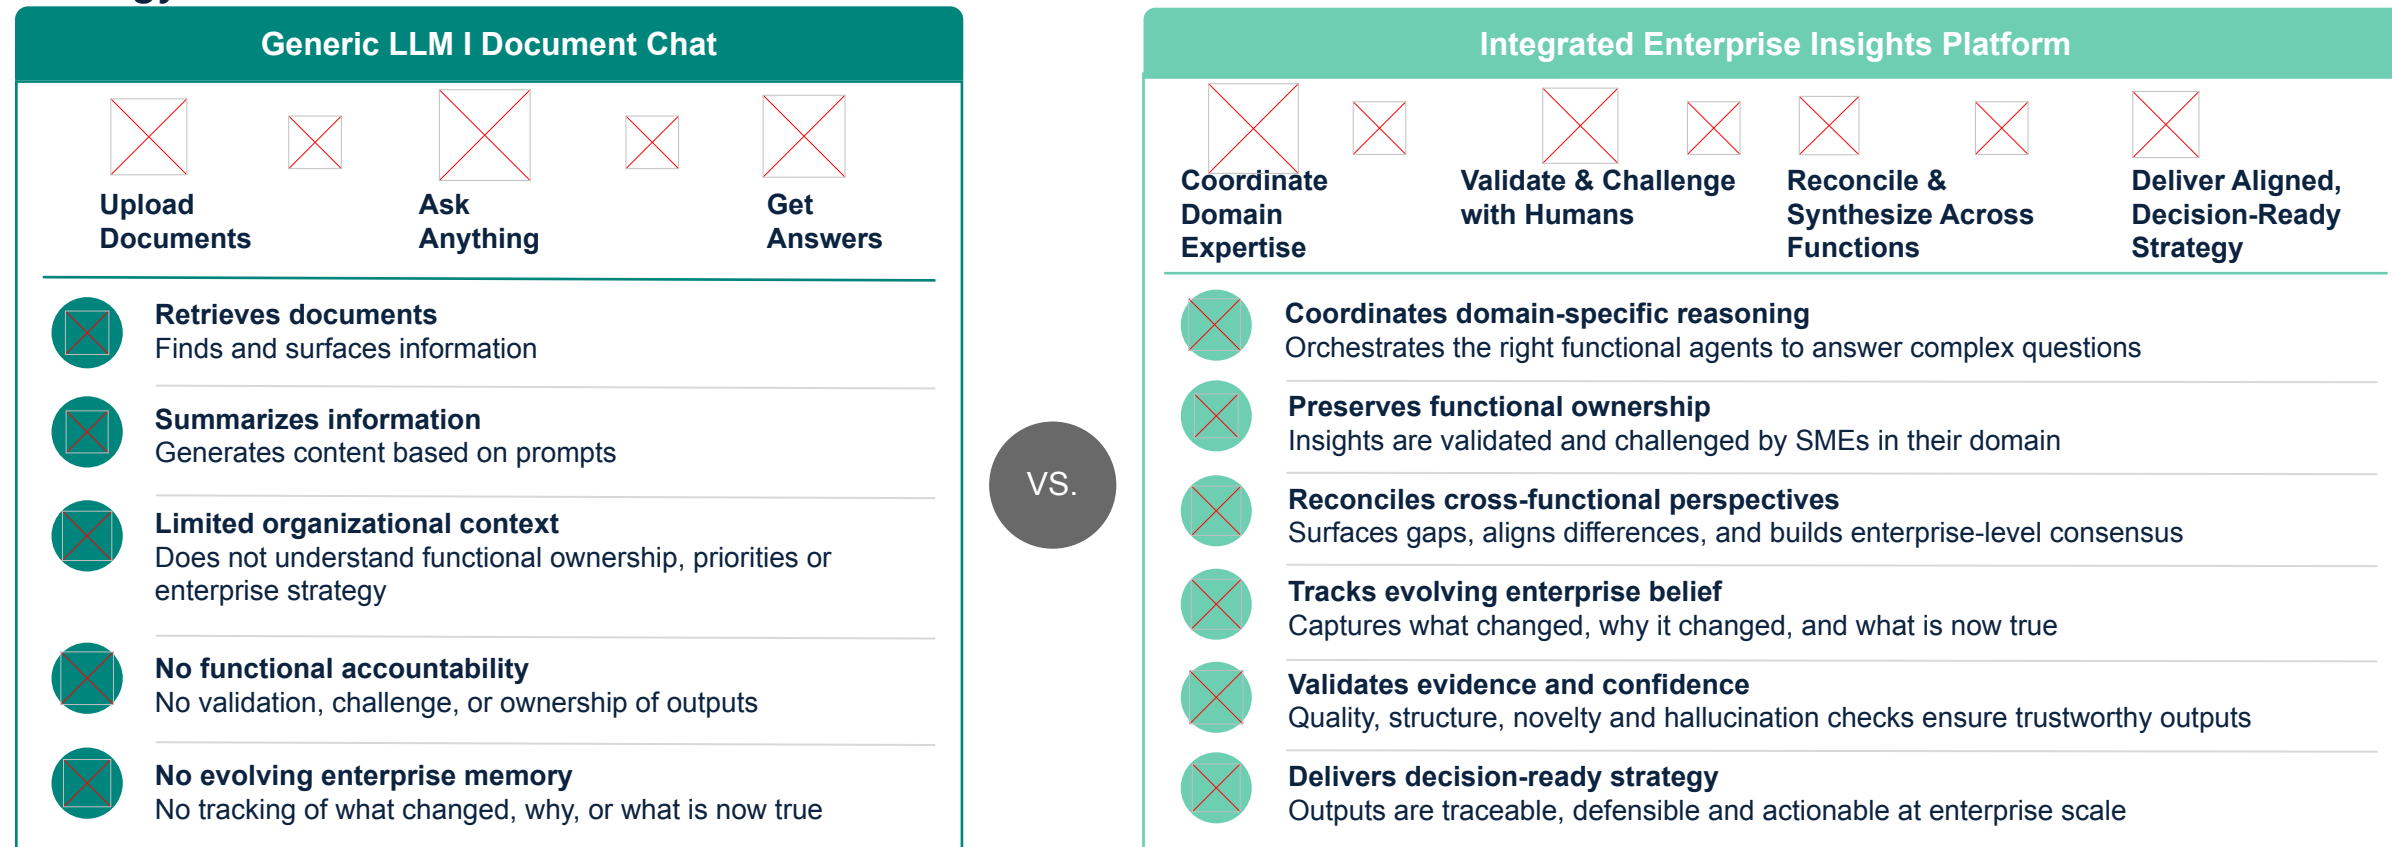

Functional Copilots accelerate functional insights (“signal discovery”)—Integrated Insights Engine align enterprise strategy

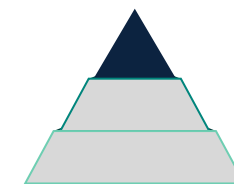

Enterprise strategic reasoning requires more than document retrieval

We are building an enterprise platform that turns fragmented functional insights into aligned, decision-ready strategy.

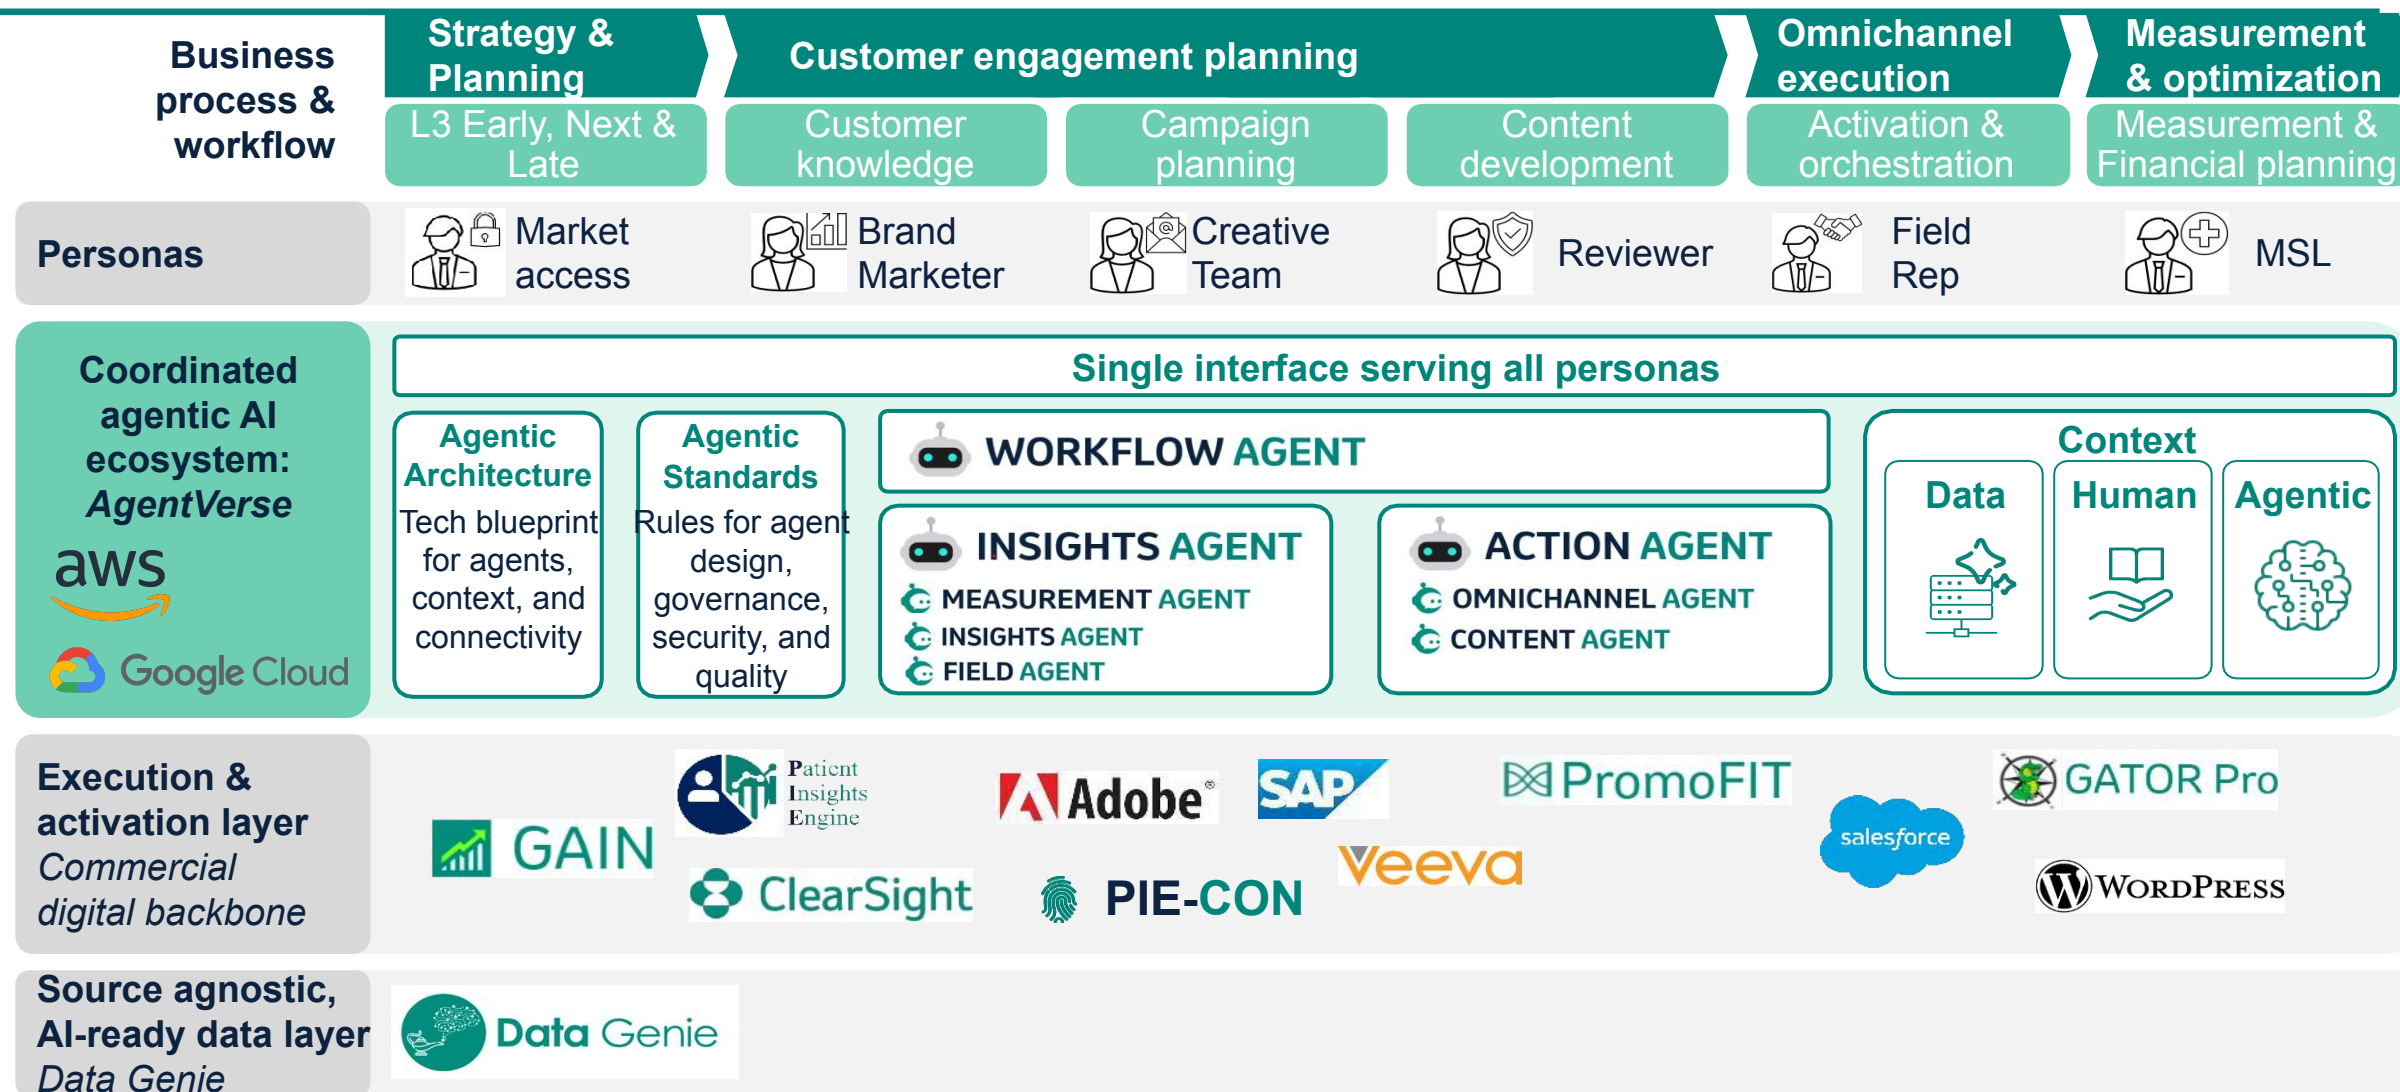

The challenge is not retrieving information - it is aligning the enterprise on defensible strategic truth.
The Integrated Insights Engine creates the organizational cognition layer enterprises need to make faster, smarter, and more confident decisions.

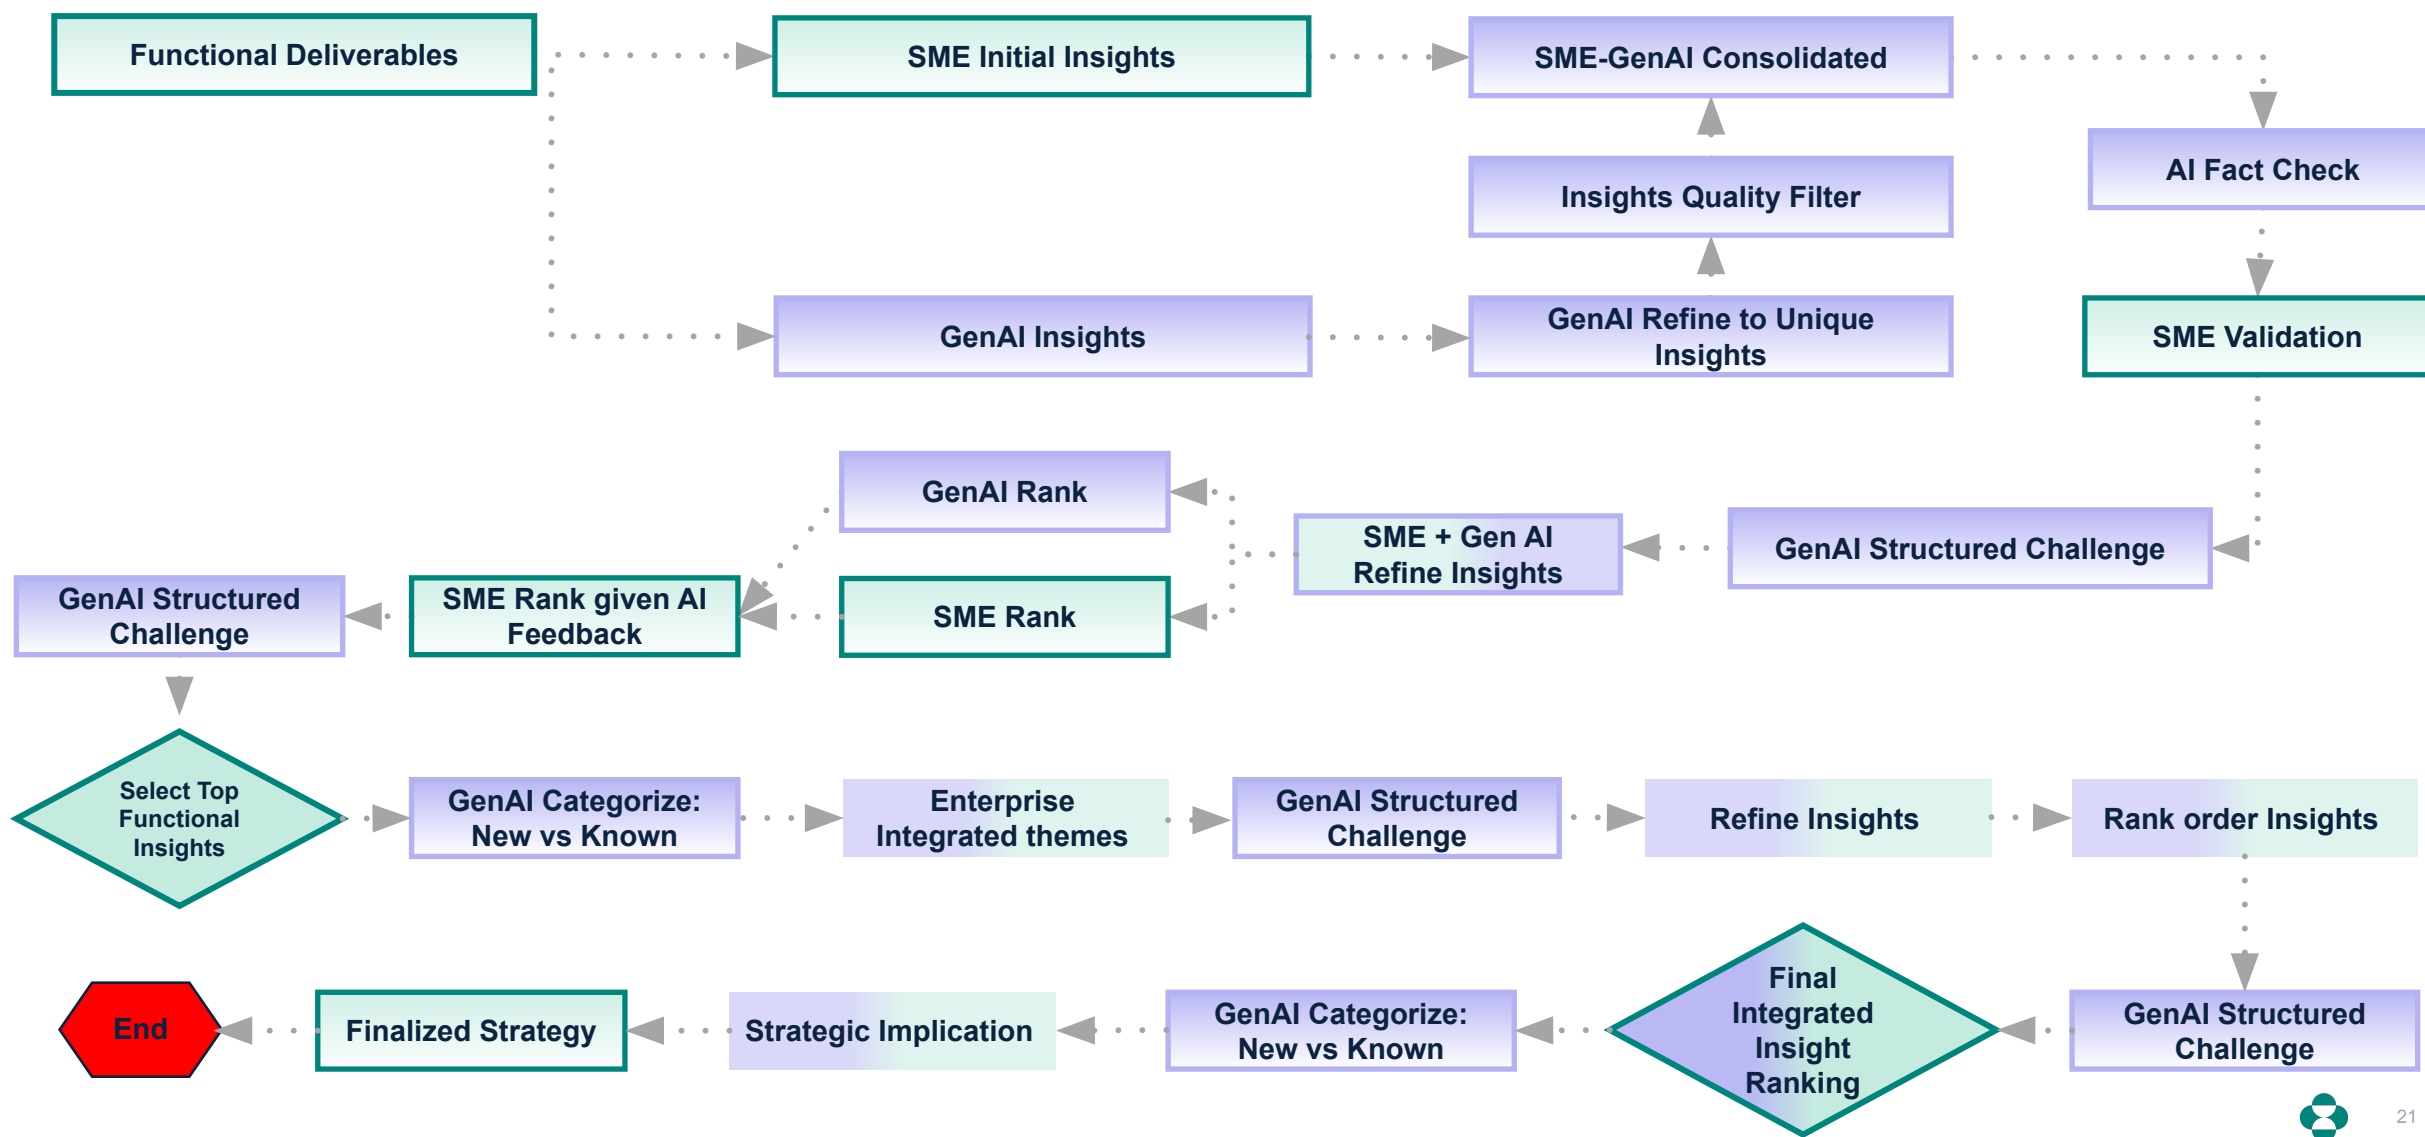

For reference: AgentVerse technical stack to be designed to orchestrate agents across sources

ILLUSTRATIVE; NON-EXHAUSTIVE

SME In-the-Loop Process for ITACS: Functional to Enterprise Insights Generation

To be added
